

Lancaster based AMS has been building and selling residential and commercial water treatment equipment to plumbers and professional installers for over 35 years. If you have hard water, now is a good time to consider a water softener for your home. If you already have a system, this might be a good time to think about getting it serviced.

To learn more about our products for your home or business, give us call at: 717-392-7322, or send an email to: sales@alanwater.com. We would be happy to discuss your needs and refer you to an expert from one of our authorized dealers in your area.

Feel the Softer Side of Pure Water

A high quality water softener from **AMS** provides soft, healthy water for you and your family.

The Benefits

Soft water improves hair texture and shine - Hard water causes shampoos to build up on your hair and scalp causing dull hair and a dry, itchy scalp. Soft water helps to eliminate the dryness and dandruff and rinses clean so the natural oils in your scalp can make you hair more manageable, softer and silky smooth. It also helps extend the life of color treated hair saving you time and money.

Soft water makes your skin softer and clearer - Hard water makes soap less effective, and it actually leaves behind a residue on your skin causing dryness. Dry, dehydrated skin can cause problems such as acne breakouts and other conditions like eczema. After installing a water softener, you'll notice that soap lathers better and washes clean.

Eliminate stains and mineral deposits on appliances and surfaces -Hard water causes hardened calcium and mineral build up on appliances as well as kitchen and bathroom fixtures and surfaces. Soft water eliminates this thereby extending the life of your appliances and reducing the need for harsh cleaning chemicals. It also prevents streaks and spots on your dishes and glasses.

Soft water makes your laundry brighter and softer - Hard water can cause fabrics to become dull, faded and coarse. Soaps and detergents simply don't work well in hard water. With soft water, your laundry stays brighter, feels softer and lasts longer. Studies have shown you can use up to 70% LESS soap or detergent with better results. This saves you time and money.

AMS provides you with reliable, high quality water treatment solutions for any application

We offer the following types of residential and commercial water conditioning systems:

Water Softeners - Variety of sizes with different valve types with both basic cation resin and fine mesh resin.

Iron Removal - Applications to reduce or eliminate any level of Ferric or Ferris iron in your water. Helps to filter out iron particles and reduce staining.

Acid Neutralizers - Helps control low pH levels (<7 pH) that can cause water to be aggressive and acidic. This water can damage plumbing, appliances and fixtures.

Hydrogen Sulfide (HS) Removal - Eliminates rotten egg or sulfur smell. HS is often present with high iron, low pH water. Gas is insoluble in water, flammable and colorless. Often produced by sulfur-reducing or iron bacteria.

Water Filtration - Backwash filter systems to eliminate chemicals, metals, gasses, and suspended particulate matter.

Nitrate Units - Anion exchange systems specifically designed to remove toxic nitrates, sulfates, and arsenic.

Reverse Osmosis

UV Light
